DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. **Claims 1-19** are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over **claims 1-13 of U.S. Patent No. 6,146,257**. Although the conflicting claims are not identical, they are not patentably distinct from each other because the sharpening apparatus as claimed in both instances are similar and are similarly manipulated to form different angles to perform the sharpening process.

Specification

3. 35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are:

- Page 1, line 31, change "with use" to read "with the use".
- Page 2, lines 8 and 9, change "small to have about 2.0 mm length and 0.5 mm thickness" to read "small having about a 2.0 mm length and a 0.5 mm thickness".
- Page 2, lines 24 and 28, change "in respect of" to read "with respect to".
- Page 2, lines 24 and 25, the phrase "a measurement object having a measurement object portion" is awkwardly written.

- Page 4, line 14, change "thereof adapted to" to read "adapted to".
- Page 5, line 33, change "the angle measurement device include" to read "the angle measurement device includes"

Claim Objections

4. Claims 1, 6, 8, 11, 14 and 15 are objected to because of the following informalities:

In claims 1, 6, 8 and 11, the phrase "with a measurement object portion of a measurement object, the measurement object portion" is awkwardly worded.

In claims 14 and 15, the phrase "a sharpening member for sharpening a workpiece portion of a workpiece, the workpiece portion" is awkwardly worded.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. **Claims 1, 4, 6-12, 14, 15 and 16** are rejected under 35 U.S.C. 103(a) as being unpatentable over Revell '025 in view of Lore '054.

Revell discloses a dental tool grinder comprising: holder having a first flat face adapted to be in contact with a measuring object (22), a straight member projecting from a second face of the holder and having a size sufficiently greater than the object measuring portion (41), a scale plate, a base plate for supporting the scale plate (Fig. 3), a sharpening section including a base plate having a substantially flat face (15) with a guide member formed on the flat face of the base plate integrally therewith (23). Revell does not specifically disclose a magnet mounted to the holder. Lore discloses a machine tool table comprising a

magnet for securing devices thereto. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have made the apparatus of Revell with a magnet as taught by Lore so as to secure devices thereto.

Allowable Subject Matter

7. **Claims 2, 3, 5, 13 and 17-19** are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
